

SAHAMATI SAMVAAD 2026 · THEME 3 · PROTOTYPE

Advice is only as good as what it can see.

Advice on a partial picture doesn't get more accurate. **It just gets more confidently wrong.**

SEBI-registered, fee-only money advice for India's middle class · EPF, income-tax and loan data still don't reach it.

Real advice is a team. Few can afford one.

1 adviser for every 70,000

salaried EPF members

~**1,000** SEBI-registered investment advisers | **7 crore+** EPF members

...and even they advise without EPF, income-tax or loan data.

The wealthy hire a team. **Everyone else gets dashboards.**

It saves first, then decides.

Lock in first — the cashflow agent's questions find the real surplus; you commit it before you spend.

Goals by priority — must-haves funded first.

Portfolio, checked — your wealth mix, scored out of 100.

NEXT BEST RUPEE

"Your next rupee goes to your emergency fund."

Before we say a rupee is spare, six things happen.

The range narrows as the engine explains more of your transactions.

What it takes to say one sentence of advice.

AI agents decide what to ask. Rules decide what to recommend.

"Your next rupee goes to your emergency fund."

	SPECIALIST ALONE SAYS	THE RULE WHEN THEY MEET	CONFIDENCE GATE
 Goals alone	✗ "Fund the holiday first" "Save more than you have"	→ Must-haves first, capped by the surplus	Act ≥ 0.70
 Cashflow, missing an EMI	✗ "Your surplus is bigger"	→ Confidence held at 0.69	0.69 — an EMI from an unlinked account Flag 0.40–0.70
 Portfolio, chasing returns	✗ "Buy the top performer"	→ Fund must fit the goal; EPF backs retirement only	Wait < 0.40

A quiet month is an answer.

240,299 rows from 61 real accounts

2,130 FIP answers

1,070 with data

1,060 “no transactions”

When a bank answers with zero rows, we record it as a month with no transactions — not as missing data.

Each missing rail blinds a specialist.

MISSING RAIL · STATUS

EPF

Schema only · not requestable · no FIP

Income tax (ITR)

No schema · no FIP

Loans & credit cards

No FI type · card schema only

WHAT GOES WRONG

Can't see the largest retirement asset; asks you to save more than needed

○ **SIMULATED** · see slide 9

Must guess a self-employed person's income from bank credits

No rate or terms → can't rank "prepay or invest?"

GST is already on the rail (GSTN notified as FIP, Nov 2022) — our GSTR-1/3B parser is next.

One rail arrived. Five answers changed.

Rahul, 32, salaried — the same engine before and after his EPF becomes visible.

EPF already covers **₹8,679/month** of his retirement catch-up.

Advice, not lending.

Each new rail is a parser, not a product.

Periodic consent from people who aren't borrowing — a non-credit reason for EPFO to join the rail.

7 crore+

EPF members —
ready the day EPFO joins the rail.

61 accounts today

EPF members, the day EPFO joins

the documented self-employed,
through GST data already on the rail

free analysis · advice ₹199/month · cost grows with data fetches and compute, not headcount

Founder · ran a **₹150 crore P&L**; scaled a team **80** → **400+** at Unacademy

REGULATED

SEBI RIA since 4 Nov 2025 · FIU certified Dec 2025 · listed on Sahamati's public certified-entities register · live on Finvu

BUILT

Full-time since July 2025 · **16,000+** automated tests · **~480K** lines of production code · **25+** account types

TEAM

Ravindranath Yemmanuru, Designated Partner · **Keerthi Sagar Sharma**, Chartered Accountant (10 years), supports RIA compliance

PROGRAMMES

DPIIT recognised · NVIDIA Inception · Google for Startups Cloud

Three things Sahamati can do.

1

An EPF mock FIP in the sandbox

We deliver our EPF parser and test payloads within 30 days of a sandbox slot.

2

Back an EPF FI type at ReBIT and EPFO's notification as an FIP

With Finwiser as the first test FIU. We'll test EPF the week it opens.

3

A seat on the loan, credit-card and income-tax data-type working groups

So advice can rank "prepay or invest?".

From day one we give back: a monthly report on which FIP answers come back empty or failed — and our EPF parser.

**Advice on a partial picture doesn't get more accurate.
It just gets more confidently wrong.**
