

Same money. One missing rail.

You can only advise on what you can see.

Investment advisory services are provided by Chandrachuda Sarma Yemmanuru Proprietor Finwiser, SEBI-registered Investment Adviser INA000021331, which also holds the AA FIU certification (Central Registry #178). Finwiser Technologies LLP is the technology provider and is not a SEBI-registered intermediary.

Everyone's investing. Nobody's advising.

Retiring father, 60

high risk

Working mother, 35

no diversification

Fresh graduate, 24

decision paralysis

Regulated advice is a product for the wealthy. Everyone else gets dashboards — blocks, not advice.

Real advice is a team. It only works when the chain connects.

When goals, cashflow and portfolio don't connect, advice stays incomplete.

The Account Aggregator made it possible. We closed the chain.

The rail brought the whole picture into one consented place. Finwiser built the team that reads it — connect, detect, direct.

Two links are still missing on the rail.

“Am I on track for retirement?”

“How much can I safely lock in?”

Not the engine — the inputs. Two questions still answered on half a balance sheet.

Close the EPF link: the retirement ask becomes affordable.

55% → 34%

of monthly surplus — the retirement catch-up the engine asks for, before → after EPF is visible

Real parser, real net-worth and goal engine; simulated EPFO feed on a synthetic user. It also found a bug — fixed.

AFTER

₹41.3L net worth · catch-up ₹14,444/mo

EPF auto-linked to retirement

SIMULATION · REAL ENGINE, SIMULATED EPFO FEED, SYNTHETIC USER

Before: ₹31.5L · ₹23,123/mo

Payloads validated against the published ReBIT EPF schema · no EPFO data accessed · projections, not guarantees.

Close the income link: she can lock in more, first.

Next cohort — not served today.

₹67K → ₹88K

what Priya can safely lock in for her plan
each month — savings first, expenses after

Inferred income: only the conservative end is safe to
commit. Declared: ₹21K a month more, saved first.

Design mock, not a screenshot · CBDT/GSTN data not on AA rails today · values illustrative, mechanism real · estimated band about ±27% → ±7%.

Who this includes.

1.53 crore

active GST registrations (GSTN, June 2025) — plus the non-salaried ITR filers

Today: India's salaried middle class — the EPFO link is theirs.

Next: the documented self-employed — the ITR · GST link. Legible to the tax system, invisible to the advice market.

Advisory consent is periodic and aligned — a non-credit reason for EPFO and GSTN to join the rail.

The rail exists. The FI type doesn't. That's the ask.

GSTN

NEAR-TERM

GSTR-1/3B is already a requestable FI type; our consent group carries it.

To build: a parser and an income signal — GST returns carry turnover, not income; income is derived with ITR and bank data.

EPFO

FURTHER OUT

ReBIT publishes the EPF schema; our pension parser already targets it.

Not yet a requestable FI type: spec revision, EPFO onboarding, FIU re-certification.

Three rails already feed one engine. A new rail is a link, not a rebuild.

CBDT: neither schema nor FIP today — we say so.
