

Same money. One missing rail.

You can only advise on what you can see.

Investment advisory services are provided by Chandrachuda Sarma Yemmanuru Proprietor Finwiser, SEBI-registered Investment Adviser INA000021331, which also holds the AA FIU certification (Central Registry #178). Finwiser Technologies LLP is the technology provider and is not a SEBI-registered intermediary.

Two questions, answered on half a balance sheet.

“Am I on track for retirement?”

Bank

MF

NPS

Demat

EPF — not on the rail

Rahul, 32, salaried. His EPF — his largest retirement asset — is not on the rail.

“How much can I safely put away?”

Bank credits

ITR

GST

Priya, 34, freelance. Files ITR and GST; neither reaches an adviser.

Legible to the tax system. Invisible to the advice market.

Who this includes.

1.53 crore

active GST registrations (GSTN, June 2025) — plus the non-salaried ITR filers

Legible to the tax system, invisible to the advice market.

Advisory consent is periodic and aligned — a non-credit reason for EPFO and GSTN to join the rail.

Three rails already feed one advice engine.

A new source is a parser and a consent template — not a redesign.

Same money. One missing rail.

55% → 34%

of monthly surplus — the retirement catch-up the engine asks for, before → after EPF is visible

Real parser, real net-worth and goal engine; simulated EPFO feed on a synthetic user. It also found a bug — fixed.

AFTER

₹41.3L net worth · catch-up ₹14,444/mo

EPF auto-linked to retirement

SIMULATION · REAL ENGINE, SIMULATED EPFO FEED, SYNTHETIC USER

Before: ₹31.5L · ₹23,123/mo

Payloads validated against the published ReBIT EPF schema · no EPFO data accessed · projections, not guarantees.

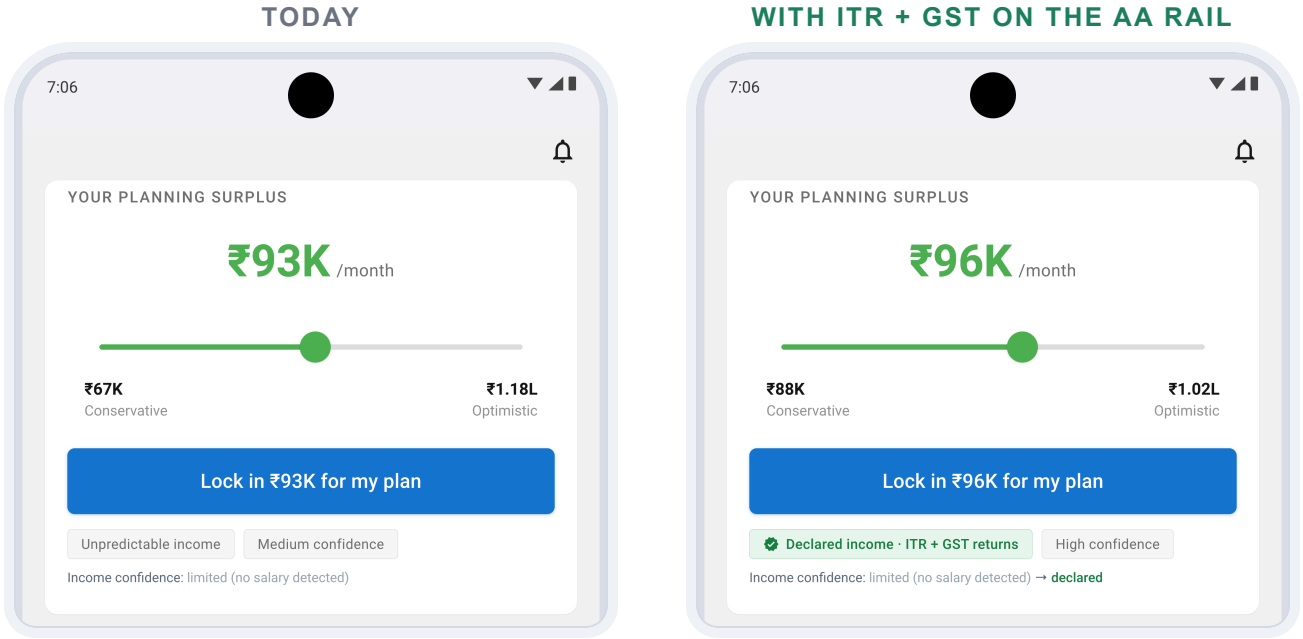

Declared income lets her commit more, first.

₹67K → ₹88K

what Priya can safely lock in for her plan
each month — savings first, expenses after

Inferred income: only the conservative end is safe to
commit. Declared: ₹21K a month more, saved first.

Design mock, not a screenshot · CBDT/GSTN data not on AA rails today · values illustrative, mechanism real · estimated band about ±27% → ±7%.

Near-term, further out.

GSTN
NEAR-TERM

GSTR-1/3B is already a requestable FI type; our consent group carries it.

To build: a parser and an income signal.

EPFO
FURTHER OUT

ReBIT publishes the EPF schema; our pension parser already targets it.

Not yet a requestable FI type: spec revision, EPFO onboarding, FIU re-certification.

CBDT: neither schema nor FIP today — we say so.
